

February 9th, 2026

Due to maintenance being done on the drinking water system in Thornhill, a Boil Water Advisory will begin on **Tuesday February 10th at 9:00am** to ensure the protection of public health for the following locations shown on the map below. There will be periods of low pressure and or no water as we connect two different lines to the new development.

Once water quality standards can be maintained, the rescind notice will be issued. Water samples will be sent into the Lab by Wednesday, with results expected back by the weekend.

Starting **February 10th at 9:00am** and until further notice, citizens should use boiled water or bottled water for:

- Drinking and making ice
- Preparing beverages, including infant formula
- Preparing food
- Brushing teeth

The Boil Water Advisory will remain in effect until the water supplied by this water system no longer presents a risk to public health. Updates will be posted on the water advisory icon on the bottom of our website.

Thank you for your patience and understanding.
